Full Stack Developer ▫ Life long learner ▫ 10+ years successfully designing, developing & implementing technical solutions at all layers of the development stack ▫ Committed to writing clean, reliable, & efficient code

EXPERIENCE

Rivers Agile, Pittsburgh, PA — *Software Engineer*
January 2020 – Present

Provide full stack development services to clients across multiple verticals. Operate in a capacity which provides efficient solutions for complex development tasks across all layers of implementation.

- Develop front end user interfaces which reflect figma mock ups
- Design and implement complex enterprise authentication work flows
- Create well documented, efficient and reliable code across multiple projects
- Provide support & guidance to less experienced developers
- Write unit tests which accurately tests the code base
- Break down, define, estimate, design & complete stories with minimal technical oversight

Transportation Compliance Associates, Inc., Pittsburgh, PA — *VP, Technical Architect*
May 2011 – July 2012 – **Network Administrator**
July 2012 – February 2014 – **Database Administrator**
January 2014 – PRESENT – **VP, Technical Architect**

Key contributor and sole developer to providing compliance web applications to clients including fortune 500 companies.

- Developed database containing 70 mil consumer products used to service largest online retailer in the word – Scripting & stored procedures to automate daily activities immediately reduced error and turn time
- Developed regulatory record retention database and user interface responsible for creating, maintaining, and delivering records to 450+ companies
- Utilized Python + Django to develop multi-faceted web portal currently used by 1000s of users globally
- Created Python PDF automation tool with extensive business logic currently being used by one of the worlds largest oil producing companies
- Developed in-house LMS used to sell compliance training to clients and provide reminders of upcoming requirements
- Developed React front end to interact with GraphQL data source to monitor and analyze third party freight carriers' safety performance
